

1. URINATE into the toilet.

2. WASH thoroughly your hands with SOAP.

3. DESINFECT the glans with the antiseptic solution and DRY with a second sterile compress.

4. OPEN the provided sterile container without touching the inside and place lid on upside (patient label side on the tray).

5. COLLECT all of the sperm obtained by masturbation into the container and close it tightly. You should inform the staff any loss of any fraction of the sample.
6. Place the flask on the tray and place it in the flat pass.
7. After collection or if needed, please inform the staff (shortcut keys on the phone). THANK YOU
